ABSTRACTED-PUB-NO: ZA 9406419A

BASIC-ABSTRACT:

The insect screen comprises a sheet of flexible mesh fabric (10), which is bordered with a strip of binding (12) cut on the bias, and adhesive strips such as hook and pile fastener tape (14) secured to the reverse side of the binding. The hook and pile fastener tape can extend the entire length of the binding. Alternatively, it can be secured to portions of the binding such as on the corners of the screen.

For convenience, the loop section of the hook and pile fastener tape is secured to the binding and the hook section of the hook and pile fastener tape is secured to the opening which the screen is intended to protect. To secure the screen to the opening, the hook and loop sections of the hook and pile fastener tape are pressed together and, to remove the screen, the hook and loop sections are pulled apart.
